and Financial Times Deutschland (FTD)

# New Thinking about Global Challenges

Date: October 10<sup>th</sup>–11<sup>th</sup>, 2011  
Venue: Umweltforum Berlin

GSDP is coordinated by

## Outline

The 21<sup>st</sup> century will be a period of unprecedented global challenges – instability of financial markets, global environmental change, large-scale demographic shifts, and more. The famous saying of Einstein's – that we cannot solve problems with the thinking that generated them – is particularly relevant in the face of these challenges. There is an urgent need for new thinking about global systems, in particular about the main driving force of globalization: the world economy.

This conference is organised by the European research network Global Systems Dynamics & Policy (GSDP), the Institute for New Economic Thinking (INET) and Financial Times Deutschland (FTD) to foster the transition from the thinking that generated the global challenges of our times to a new thinking that shall help decision makers and the wider public to cope with them.

Themes include the difficulties of coordinating economic policy worldwide, the relation between inequality and globalization, the perspective of green growth, the role of demography, as well as a wide variety of methods to improve our understanding of global challenges.

The study of global systems can and must advance in a dialogue between the community of scholars investigating them and the wide variety of stakeholders involved in them. The conference will offer a major opportunity for such dialogue.

Monday  
October 10<sup>th</sup>  
2011

- 09:30 Registration**
- 10:00 Plenary**
- 10:00 Welcome: One World, One Crisis?**
