Profile

Prof. Jaeger is a sustainability scientist with a background in economics, sociology and human ecology. He has helped define the field of sustainability science since its beginning, being co-author of the Science paper that introduced sustainability science to the academic community. He has been influential through empirical research – e.g. his 2008 paper in Risk Analysis on the European heat wave of 2003 – and theoretical analysis – e.g. his widely quoted, and re-printed, 2010 paper in Climate Change Economics on the 2 degree limit as a focal point for climate policy cooperation.

A large part of Carlo Jaeger's research is related to the climate challenge, at least since he co-edited the volume "Views from the Alps" (MIT Press, 1998). He has been one of the pioneers of reframing the climate challenge from burden sharing to opportunity seeking – as with the book "Reframing the problem of climate change" (Earthscan, 2012), and with the trans-continental (US-EU-China) conference "Unpacking Green Growth" that he inspired and co-organized in 2014.

The theme of risk and uncertainty is a recurrent thread in Carlo Jaeger's research since he published the award-winning volume on "Risk, Uncertainty, and Rational Action"(Earthscan, 2001). The subject of risk unifies a wide range of work of his, like the 2015 Nature Climate Change article on coastal risk management and the 2016 Science paper on financial regulation.

Carlo Jaeger's research has always been use-inspired, connecting fundamental theoretical problems with the experiences and needs of practitioners. In this spirit, he has worked closely with the German Federal Ministry for the Environment on the design of climate policy. The computer simulations documented in the 2009 and 2011 research monographs contributed to the ministry's reframing of climate policy towards the emerging design of the German 'Energiewende' (energy transition).

His work is marked by trans-disciplinary cooperation. He has always worked with strongly trans-disciplinary teams, out of which excellent researchers have developed successful careers. He has been on PhD committees for economists, mathematicians, geographers and more, and cooperates with researchers of the corresponding disciplines in Europe, the US and China, with whom he shares a perspective of sustainability science.
